

Many design professionals and municipalities are specifying the **Ezz-Klean™** process to help clean and maintain wet wells, tanks and deep inlets.

This U.S. Patented device reduces maintenance costs, increases worker safety, and extends pump life, in every application.

EZZ-KLEAN™

1928 Stewart Ave • Medford, OR 97501

The EZZ-KLEAN™ is Green and will save its initial cost in energy and labor.

EZZ-KLEAN™

Product/Service Information

Because cleaning is beneath you use the
EZZ-KLEAN™

Phone: 541 779-3565

EZZ-KLEAN™ works to save time during routine maintenance as the wide mouth funnel is always beneath the waste build up and pulling in the debris is made easy i.e. not from the top down as the conventional method would require this method also increases the exposure to injuries as the heavy hose is difficult and cumbersome to handle and the dangers of working over an open hatch exposes the worker to deadly falls.

For all this and for other reasons mentioned why not try the **EZZ-KLEAN™** method. The **EZZ-KLEAN™** can help prevent SSO'S, the easy to remove cam lock provides quick access to the wet wells contents.

Our idea will eliminate most of the problems associated with regulatory compliance in cleaning sludge, rocks, sticks and even bones. All have been known to wreak havoc on pump impellers. E-Z solutions for the E-Z cleaning created the **EZZ-KLEAN™** tube.

EZZ-KLEAN™

The easiest method to clean wet wells, tanks, digesters and storm inceptor.

The **EZZ-KLEAN™** employs High Density Polyethylene with a hydraulic efficient smooth interior wall to maximize vacuum forces when combined with our **EZZ-KLEAN™** slick floor.

An Alternate Approach

OR OSHA Has issued new confined space rules that effect all persons and managers who are charged with having to enter confined spaces. Now, OSHA requires that new technology that would aide in preventing confined space exposure should be utilized

Septic Tank Testimonials

Engineer Garrett Pallo had to say, "As an engineer I recognize the benefits of hydraulic efficiency and upon seeing how fast it removed the sticks and rocks there is a benefit to having a smooth vacuum head and without the kinks and bends that typically plague corrugated suction hose. It was fast and the name **EZZ-KLEAN™** really says it well."

"An SSO is something we don't even want to think about," said Mike Collins Oregon State Parks regional manager out of Salem, "but with the high winds and many storms that buffet the coastal range. We looked at the **EZZ-KLEAN™** as added insurance towards protection of our beautiful park. As an added benefit we have many volunteers who work and add value to keeping our parks beautiful. We recognize that in an emergency we would want them to call a pump truck and be able to hook up quickly to the **EZZ-KLEAN™** Quick-Adapt Top."
